Art Unit: 2879

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by de Vrijer (USP '529, submitted by applicant).

De Vrijer discloses applicant's claimed metal halide discharge lamp (Figures 1-2) including an arc tube (1; 6); a pair of electrode (2; 7); xenon rare gas; a low melting point metal halide (scandium iodide and/or sodium halide; col. 2, second paragraph) with a melting point inherently less than or equal to 400 °C (since these halides are the ones which are claimed by applicant in claim 3).

Consequently, de Vrijer anticipates applicant's claims 1-3.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2879

a. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 4-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over de Vrijer as applied claim 1 above.

Although de Vrijer does not disclose the arc discharge lamp including specific dimensions as claimed by applicant including pressure of xenon, arc tube wall thickness, arc tube content volume, cross-sectional area of the discharge space and the tube wall etc. selecting appropriately suitable parameters would have been obvious to those skilled in the art for optimizing operating characteristics.

5. Claims 9-16 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

Prior art of the record does not disclose applicant's claimed metal halide lamp, as specifically recited in claim 9, including specific claimed dimensions.

Art Unit: 2879

6. Claims 17-20 are in the condition for allowance since prior art of the record does not disclose applicant's claimed metal halide lamp as specifically recited in claim 17 including specific claimed dimensions.

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Russell et al and Frey et al each are cited for showing a general structure of a metal halide discharge lamp.
